After "save" is clicked the user is able to accept the terms and conditions to place their order into the system
(Exception: if all of the fields are not filled out the Accept button will be blocked and a prompt will be given—"please fill out required fields to continue")
User can always go back to edit mode up until they click accept

?? how do we want content to be input in the fields? how should quantities be represented? should units be input or containers? how does the user specify or how do we control inputs? is price/unit or total?

?? is it clear what data is going into which fields? do we need to keep the "preferred location" and "pick up location" headers?

*Next update will be a subtotal
